

Computers are great. Don't you think? They can play a key role in personalized learning. They can give every child the perfect personalized type and level of content. But there is one big problem: as a teacher, you have no idea what they're doing behind those screens. And as a student, you're just doing exercises, not knowing where you came from or where you are going. Do you and your students want the control back? Our product Eduhack is the solution for you. Eduhack gives you overview, direction and control.

First, Eduhack gives you overview. As a student you see how you, and as a teacher you see how your students score on all subjects that are relevant for you. How are you doing compared to your group, your school or the whole of the Netherlands? Information from all available educational content is combined, so you don't need to login in all different programs. And all programs are free to link to Eduhack and share their information. Also, you yourself, as a student or teacher, can feed data about the progress into the system. Because who knows the student better than you, the teacher, or the students themselves?

Eduhack also gives you direction. It notices automatically who is doing well or badly on which learning goals or subjects. If you need to work on adding numbers with two digits, Eduhack will tell you. Having trouble writing words with ng? Or need to work on the forest life in the Netherlands? Eduhack will tell you.

Finally, Eduhack gives you control. All programs can only give an indication on whether they think you or your students have completed a certain learning goal. We will leave it up to the student or teacher to make an educated decision about this, based on all data from different programs and what other teachers have concluded from similar data. The student and teacher decide which learning goals are reached and which ones need to be worked on. The student and teacher are in control.

If you're excited, we can make this for you. Our team: a teacher, who knows better than anybody how Eduhack will be used in schools every single day, a content developer, with insight in how to link all the content from different programs to the learning goals of your choice, and three enthusiastic engineering and statistics students with lots of ideas about the right visualization, who were up all night to build you a prototype and are willing to go through some more sleepless nights, just to make sure your wishes are being fulfilled.

Eduhack gives you overview, direction and control. My question to you now is, are you with us? Are you excited for us to develop this product, so you know what your children are doing behind those screens? And so your children know where they came from and where they are going? I hope you are, because we can't wait.

Thank you.
